GAI MACCHINE IMBOTTIGLIATRICI SPA - BOTTLE SORTING MACHINE

This empty-bottle sorting machine verifies the resistance to internal pressure, the presence of occlusive defects in the bottle neck and the possible micro-fissures. The bottle sorting machine 45012 allows the control of 100% empty bottles, guaranteeing that only the perfect ones can reach the filling phase and thus reducing machine downtime to control and eliminate glass shards after breakages. Losses of product caused by breakages are reduced in the filling phase, as well as in the following steps.
