

INNOVATION CHALLENGE “LUCIO MASTROBERARDINO”**NEW TECHNOLOGY SIMEI 2017****VELO ACCIAI SRL - UNICO**

It is a multi-phase tangential filtration system for heterogeneous blends of different food matrices. For the first time in the market, a tangential filtration plant is presented, which is capable of treating both must and lees. UNICO is based on the idea of combining two filters within the same machine, each one having a different, operational specific characteristic. This allowed a constructive, as well as economic optimisation, making the plant affordable also for small and mid-sized wineries.
